

# CRATING AND WOOD BOXES

Wooden crates are an excellent solution when an item to be shipped requires greater stability and protection than what corrugated cardboard packaging can offer. DGM New York can create custom designed crates for your shipment so that it arrives to its destination safely and free from damage.

Our experts take all aspects of the items needs into consideration, from its weight and dimensions to its fragility and mode of transportation. We then select the best possible method for packing and securing the shipment. Our boxes are designed with advanced computer software to ensure that you receive the optimal design for your shipment while reducing wasted materials. This keeps your crating cost effective and Eco-friendly.

We offer:

- \* ISPM-15/IPPC Compliant
- \* Custom Designed Crating
- \* UN Specification Wooden Boxes
- \* Re-usable Crates
- \* Vapor-Barrier Protection
